

**NATIONAL UNIVERSITY**  
of Computer & Emerging Sciences, Lahore

## Department of Computer Science

---

### **CS-217 – Object Oriented Programming** **Spring 2022**

**Instructor Name:** Saira Karim  
**Email address:** saira.karim@nu.edu.pk  
**Office Location:** Civil Block Ground Floor  
**Office Hours:** Mon-Wed -10:30-11:30 a.m.

**TA Name:**  
**Email address:**

#### **Course Information**

**Program:** BS (CS)  
**Credit Hours:** 3 + 1 for Lab  
**Type:** Core  
**Class Venue:** CS - 9  
**Pre-requisites:** Programming Fundamentals (CS-118)

#### **Course Description/Objectives/Goals:**

The core objectives of this course are to introduce,

- Object oriented programming with data abstraction and encapsulation.
- The classes, objects and relationship among different objects and classes in C++?
- Generic programming using templates, and template specializations.

#### **Course Learning Outcomes (CLOs):**

<b>At the end of the course students will be able to:</b>	<b>Domain</b>	<b>BT* Level</b>
Understand dynamic memory management with pointers.	C	2
Understand principles of object oriented program	C	2
Identify the objects & their relationships to build object oriented solution	C	3
Model a solution for a given problem using object oriented principles	C	3
Examine an object oriented solution	C	4
* BT= Bloom's Taxonomy, C=Cognitive domain, P=Psychomotor domain, A= Affective domain		

#### **Course Textbooks:**

1. C++ Programming: Program Design Including Data Structures, by D. S. Malik (8<sup>th</sup> Edition)
2. C++: How to Program? by Deitle & Deitle (9<sup>th</sup> Edition)

#### **Additional references and books related to the course:**

3. Problem Solving with C++, by Walter Savitch
4. <https://www.learncpp.com>

## Course Contents Weekly and Lecture-wise Breakdown

Week	Topic	Lecture-1	Lecture-2
1	<b>Pointers</b>	Pointers Introduction, Pointer variables and Initialization, Address of Operator, Dereferencing Operator. Pointer Operations (Relational, Arithmetic)	Use of Constant with Pointers. Difference between a Pointer and a Reference. Passing pointers to functions by value and by reference.
2		Dynamic memory allocation using pointers and accessing dynamic memory. Dynamic Variables new and delete operators.	Dynamic 1- dimensional arrays, Create, Delete, Grow and Shrink. Example of programs using 1D dynamic allocation: e.g., mathematical sets union and intersection.
3		Memory Leak and Dangling Pointers, Dynamic 1- dimensional char arrays for strings, string operations like search, concatenation etc.	Pointers Indirection. Dynamic 2D, allocation, matrices, CStrings etc.
4	<b>Object-oriented basics</b>	Structured Programming vs Object-oriented Programming, Principles of modularization, abstraction and encapsulation.	Objects vs Class, state vs behavior, access specifiers (Public, Private), Member functions (accessors, utilities, mutators etc)
5		Constructors (default, overloaded), Function overloading.	Dynamic memory allocation and Object assignment, Parameter passing, Shallow vs Deep copy,
6	<b>Mid Term 1</b>		
7	<b>Object-oriented basics</b>	Copy constructor, Destructors, this pointer,	Cascaded function calls, static members, inline functions and other miscellaneous issues
8	<b>Operator overloading</b>	Unary operators using member functions	Binary operators using member functions
9		Binary operators using non-member functions, concept of friendship,	Unary operators, Pre and post increment, subscript operator.
10	<b>Object and Class relationships</b>	Part-whole relationships, Association/Aggregation	Composition Implementation issues (constructor call sequence, initializer list, etc)
11		Inheritance basics, Type of Inheritance, public, protected, private.	Function Overriding and sub-typing details
12	<b>Mid Term 2</b>		
13	<b>Object and Class relationships</b>	Polymorphism introduction Static vs dynamic binding details, virtual tables and virtual pointers,	Polymorphism vs down casting, run-time type identification, dynamic cast
14		Pure-virtual functions, Abstract classes, Interfaces (optional)	Multiple Inheritance and Diamond Problem Multiplicity, Memory Management Bi-directional relationships, Forward-class declarations issues
15	<b>Generic Programming</b>	Template functions	Template classes Template Specializations,

16	<b>&amp; Exception Handling.</b>	Exception Handling.
----	--	---------------------

### **(Tentative) Grading Criteria:**

1. Assignments + Home works + Project **(20 %)**
  2. Quizzes **(10 %)**
  3. Midterms **(30 %)**
  4. Final Exam **(40 %)**
- Grading scheme for this course is **Absolute** under application of CS department's grading policies.
  - Minimum requirement to pass this course is to obtain at least **50%** absolute marks

### **Course Policies:**

- All assignments and homework must be done individually.
- Late Submissions of assignments will not be accepted.
- No retake of announced quizzes
- **Plagiarism** in any work (Quiz, Assignment, Midterms, Project and Final Exam) from any source, Internet or a Student will result in **deduction of absolute marks or F** grade.
- Minimum **80%** attendance is required for appearing in the Final exams.
